

Nadil Fernando

kanefernando95@gmail.com • 074 1734 5277

SUMMARY

Organised and detail-oriented professional with over 6 years of experience in cloud services and infrastructure operations. Proficient in MS Office applications, with strong communication, multitasking, and customer service skills. Experienced in managing front desk operations, scheduling, and office coordination efficiently.

EXPERIENCE

*Caterham Stores, **Retail Sales Assistant***
Jun 2024 - Present

*Domino's, **Instore Pizza Chef***
Sep 2023 - Present

*Love My Robot, **Freelance DevOps & Cloud Infrastructure Engineer | AWS & Azure Specialist | CI/CD Automation Expert***
2020 - Present

Developed, implemented, and maintained full CI/CD pipelines using Jenkins, Docker, and GitHub Actions, which dramatically boosted deployment frequency and reduced release cycles by over 40%.
Headed the management of domain hosting and IT infrastructure, including DNS configuration, SSL/TLS certificate installation, and SMTP setup, resulting in better security, email reliability, and nearly zero downtime.
Coordinated bug tracking, incident management, and feature enhancement workflows with integrated toolchains such as JIRA and GitHub Projects, with quick resolution times and ongoing delivery of high-quality software releases.
Spearheaded the migration of on-premise services to Amazon Web Services (AWS) with 30% cost savings realized through compute, storage, and networking resource optimization with auto-scaling, load balancing, and right-sizing methods.
Collaborated with cross-functional groups like developers, QA engineers, and product managers to support Agile sprints, increase system observability, and implement monitoring and alerting via CloudWatch and Grafana.
Managed infrastructure as code (IaC) using Terraform for provisioning and management of cloud environments, providing consistency and reproducibility of development, staging, and production environments.
Supported container orchestration practices and microservice deployment patterns, resulting in improved resilience of applications and faster recovery from service disruptions.

*Axiata Digital Labs, **Managed Services Engineer***
Feb 2023 - Aug 2023

Developed and deployed automated test scripts in Python and Selenium, reducing sanity test time by 50%, accelerating release validation processes, and enhancing software quality assurance.
Regularly monitored and governed mission-critical IT infrastructure using Prometheus, Kibana, and Dynatrace, ensuring 100% system availability, early fault detection, and stable system performance for critical business applications.
Led the whole incident life cycle by creating, tracking, and closing service requests using ITSM tools, following SLAs and with transparent communication to internal stakeholders.
Facilitated effective collaboration with third-party vendors and service providers for fixing deeply ingrained problems, optimizing infrastructure elements, and instating improvements as aligned with business continuity goals.

*Virtusa, **Associate Infrastructure Operations Engineer***
2021 - 2023

Proactively monitored and maintained enterprise-level infrastructure systems using SolarWinds and Dynatrace, achieving 100% system uptime and defect-free performance in mission-critical environments.
Managed the whole incident management lifecycle, including the creation, classification, and escalation of service tickets using ITSM tools, while maintaining strict adherence to SLAs and timely status communication to stakeholders.
Coordinated with third-party vendors and in-house support teams to identify root causes, troubleshoot complex infrastructure issues, and create long-term corrective actions to prevent future outages.
Participated in change and release management processes, confirming system stability during updates, patches, and migrations with zero or minimal impact on service availability.

*Geoinformatics International Pvt Ltd, **Web Developer***
2017 - 2021

Developed, designed, and deployed interactive web applications in PHP, JavaScript, HTML5, and CSS3, as per client requirements and prevailing UI/UX best practices.

Maintained MSSQL database servers, ensuring data integrity, daily backups, query optimization, and robust database security policies for high availability.

Migrated numerous web applications from Rackspace cloud infrastructure to AWS, realizing a cost saving of 40% on hosting through effective resource planning, auto-scaling, and S3/EC2 optimization.

Published and served vector and raster datasets using GeoServer, enabling the integration of spatial data layers into custom GIS web applications.

Collaborated closely with cross-functional teams of GIS professionals and system architects to build dynamic, map-enabled web applications for urban planning and remote sensing applications.

EDUCATION

Purdue University

Postgraduate Certificate • DevOps • Oct 2025 - Present

British Computer Society (BCS) The Chartered Institute for IT

Professional Graduate Diploma • 2022 - Present

Key Modules: Linux, Git, Jenkins, Ansible, Docker, Kubernetes, AWS

LICENSES & CERTIFICATIONS

Microsoft Azure Fundamentals (AZ-900)

Issued 2022

Elements of AI

University of Helsinki • Issued 2021

SKILLS

Cloud Infrastructure & Services • DevOps & Automation Engineering • Monitoring, Logging & Observability • Scripting & Software Development • Database Management • Containerisation & Orchestration • Version Control & Collaboration • Agile & ITSM Practices • Prometheus • Dynatrace
